An efficient, flexible, and cost-saving solution for waste collection companies and municipalities

Our waste transfer station represents modern technology that significantly streamlines the transport of both municipal and industrial waste. Thanks to its robust construction, simple operation, and high versatility, it is an ideal solution for regional collection as well as for companies facing uncertain long-term waste processing arrangements. Our offering also includes a high degree of flexibility — our station uses standardized containers that can be easily integrated into existing logistics processes and can also be used for rail transport. This provides a significant competitive advantage, especially at a time when the availability of waste processing facilities is changing and transport distances are increasing.

Key benefits

- **Significant savings in transport costs** thanks to minimizing the number of long-distance trips.
- **Increased collection efficiency and reduced operational load** on collection vehicles.
- **Simple, reliable, and safe operation** with minimal demands on operating staff.
- **Universal and flexible solution**, which easily adapts to changes in end-point waste processing facilities
- **Option to use rail transport** thanks to compatible containers.

Technology components

The transfer station consists of the following main components:

- Access ramp (steel or concrete)
- Hopper
- Compaction unit
- Connected swap-body container
- Optional accessories according to operational requirements

Operating economics

Rental option

From CZK 121,000 / month (minimum 3-year term).

The rental price is all-inclusive and covers:

- All regular maintenance
- Service interventions including technician labor
- Operating fluids (oils, filters, etc.)
- Remote monitoring and technical support
- Ongoing updates and operational optimization

Compaction cost

Approximate cost of compacting 1 ton of waste:
approx. CZK 230 / t for a collection area of 30,000 inhabitants.

This cost **includes the rental price** of the technology. It does not include **operator wages and electricity costs**.

Installation requirements

To install the transfer station, all that's needed is:

- A location where the zoning plan permits waste handling and which is in compliance with the occupancy permit.
- Approval of the operating regulations — without any further extensive permitting processes.

We will handle all administration and necessary permits for you.

We will manage the entire process, including communication with authorities and preparation of documentation.
